Chapters and Sections

Introduction.....	1
Check Your Software Version ... The Sample Project ... Find Sample Project & Reset It ... Copy Sample Project ... GEDCOM ... Transferring Data into Family Historian ... Projects ... Standalone GEDCOM Files ... The Help ... "How To" Help ... Terminology	
1. Getting Started with the Focus Window	3
Chapter Overview ... The Project Window ... The Family Historian Sample Project ... The Navigation Bar ... Workspace windows ... The Focus Window ... The Spouses & Children Tab ... Select a Record ... Set the Focus Person ... Multiple Spouse Families ... Add Parents ... Undo/Redo ... Add Children ... Add Spouses ... Add More Relatives ... Add More Sets of Parents ... Add Relatives Using the Add Menu ... Add Unrelated Person ... Add Grand-parents and Grand-children ... Go Back & Go Forward Buttons ... The Home Button ... The Root Person (the File Root) ... Make File Root ... The Focus Button ... Adopted, Fostered, Step, etc. ... The Marriage Box ... Unmarried, Separated and Divorced Couples ... Delete Record ... Unlink Record ... Re-link Record ... Change Order of Children ... The Parents & Siblings Tab ... Spouse Families & Parents Families ... Keyboard Shortcuts ... Features of the Parents & Siblings Tab ... The Ancestors Tab ... Add Ancestors ... Switch Focus ... Right-Click Menu ... Navigate up the Ancestral Tree ... Switching Focus and Tab ... The Descendants Tab ... Features of the Descendants Tab ... More Features of Descendants Listings ... Space Bar vs. Enter Key ... Spouse Markings on Lines ... Customize ... Focus Window ... Colours ... Text Size ... Generations ... Other Options ... Close Project ... Tips for New & Upgrading Users ... Autosave ... Saving Changes to Projects ... Create a New Project	
2. Editing Records with the Property Box.....	19
The Property Box ... The Data Pane ... The Source Pane ... The Main Tab ... Gripper Bars ... Reveal Hidden Fields ... Undo/Redo ... Entering Name Details ... Don't Use Capitals; Do Use Maiden Names ... Use of the	

Tab Key ... Slashes Round Surnames ... No Mandatory Fields ... Same Sex Relationships ... Alternate Names, Titles, Nicknames, etc. ... Given Name Used ... Birth & Death Details ... Multiple Occupations, etc. ... Helper Dialogs ... Auto-Complete ... How to Enter Simple Dates ... Date Validation and Date Phrases ... How to Enter Complex Dates ... Date Entry Assistant Dialog ... Quick Ways to Enter Dates ... Improbable Date Warnings ... Spouse Tabs ... Add Child ... Change Order of Children ... Change Order of Spouses ... Add Spouse ... Add Children of Unknown Parent ... Go To Buttons ... The Up Button (Go To Parents) ... Go Back/Go Forward Buttons ... Display in Focus Window ... Go to Record ... Show Sources ... Sync with Selection ... The Property Box Menu ... Setting the Text Size and Font ... Enter Accent Characters ... Configure Language & Accent Characters ... Sort Family & Events in Date Order ... Customize Data Entry ... Version 3 Compatibility ... Property Box Options ... Float/Dock Property Box ... Auto-Docking and Auto-Positioning ... Close Property Box ... How to Open the Property Box ... You Never Have to Close the Property Box ... Modeless Dialogs ... Find Record ... The Find Dialog ... Help for the Property Box (F1) ... More on the Property Box	
3. Introduction to Diagrams	31
Some of the Things You Can Do with Diagrams ... View Ancestors ... Navigation Bar Icon for Diagram Windows ... About Workspace Windows ... How To Close Workspace windows ... The Diagram Menu and Toolbar ... Zooming In and Out ... Fit Window ... Diagram Options ... Specify Number of Generations ... Select Area to View ... Centre Diagram ... The Grabber ... Expansion Buttons ... The Property Box & the Diagram Window ... Diagrams are Dynamic ... View Descendants ... Multiple Diagram Windows ... Spouse Display Options ... Box Types ... The Diagram Root ... Text Schemes ... View Ancestors and Descendants ... View All Relatives ... Interpreting the All Relatives Tree ... Basic Diagram Options ... Generation Stripes ... Relationship Descriptions ... Layered vs. Flat ... Close the Diagram Windows ... Use the Help	
4. Pictures & Media Part 1: The Property Box	41
Overview ... Two Ways of Working ... Video, Sound Files, and Other Media ... The Property Box Media Tab ... Add Media ... Insert Video, Sound Files, Etc. ... Insert Multiple Pictures ... Drag-and-Drop ... Copy Files into Project ... Organizing Your Media Files ... Adding Externally Linked Pictures ... Why You Should Link to Faces ... How to Link to Faces ... Edit Media Item ... Link Other Faces ... Updating & Deleting Frames ... Edit Picture Details ... Keywords ... The Links Field ... Edit Link Details ... Attach a Note to a Link ... Exclude From Diagrams & Reports ... Use Note as Caption ... The Edit Media Item Toolbar ... Media Tab of the Property Box ... Media Tab Toolbar ... Unlink or Delete ... Preference Ordering of Pictures ... Toggle Picture/ Thumbnail View ... Show Face ... Go To Media Record ... View in Media Window ... Open Editor/ Player ... Pictures of Families ... Pictures of Source Records ... Pictures of Events and Attributes ... How to Show Pictures in Reports	
5. Pictures & Media Part 2: The Media Window	49
The Media Window ... Getting Pictures in Digital Format ... Add Pictures using Add Menu ... Add Pictures by Drag-and-Drop ... Add Pictures from Clipboard ... Add Videos, Sound Files, and Other Media ... The View Media Button ... Pictures of More Than One Person ... Open the Sample Project ... List Pane & Display Pane ... The Media List ... Select Pictures in the Media Window ... Searching for Media ... Find Using Query ... Select ... Keyword Filtering ... Delete Media Records ... File Links and Record Links ... Work with External File Links ... Fix Broken Links ... View Media Record in Property Box ... The Media Window Toolbar ... Picture Zooming & Scrolling ... Open Editor/Player ... Working with Multiple Media Windows ... The Media Menu ... Locate on Disk ... Options ... View Full Picture ... View/Edit Media Record Details ... Title, Date, Note and Keywords ... File Name ... File Location ... The Links List ... Annotating Pictures ... Clicking on Faces ... Attach a Note to a Link ... Exclude Picture from Diagrams & Reports ... Use Note as Caption ... Links List Toolbar ... Two Ways to Link Faces ... Add Frame Link ... Add Simple Link ... Delete Link ... Add Frame Only ... Select Frame ... Order of Links ... Show All Frames ... Locate in Property Box ... How to Annotate Picture Details ... Media Link Tool ... The Records List ... Add Links Using Drag-and-Drop ... The Close Relatives Panel ... Show Relatives Of Button ... Named Lists ... List Filtering ... Search by Partial Name	
6. Facts & Notes in the Property Box	61
The Facts Tab ... What is a 'Fact'? ... Event vs. Attribute ... View Facts Tab ... Repeated Data ... Individual Facts & Family Facts ... Table of Fact Icons ... The Age Column ... Show Timeline Facts ... Select Timeline Facts ... Witnesses & Principals ... Shared Events ... Witnesses Window ... You Never Have to Close the Witnesses Window ... Adding Witnesses ... Role Types ... Witness Notes ... Citing Sources for Witnesses ... Witnessed Facts ... Sentences & Narrative Reports ... Sentence Templates ... Overriding Default Sentences ... No Principal and Multi-Principal Events ... A Principal Can Also Be a Witness ... Witnesses with More than One Role ... Why Record Each Role? ... Add Fact ... Auto Complete ... Custom Fact Types ... Fact Sets ... Importing and Exporting Fact Sets ... Examples of Possible Fact Sets ... The Benefits of Installable Fact Sets ... Accessing the Fact Types Dialog ... Priority Ordering of Fact Sets ... Importing & Exporting Fact Sets ... Add Fact (again) ... Configuring the Fast Add Menu ... Add Multiple Facts ... Add Multiple Instances of Facts ... Copy and Paste Facts ... Sorting ... Ordering ... Re-order Out-of-Sequence Data ... Normal Time Frame ... Move Up & Move Down ... Show Media ... The Media Viewer ... Add Media ... Drag-and-Drop ... Go To ... Fact Notes ... The Notes Tab ... Note Types ... Add Note ... Editing Shared	

Notes ... Show Fact Notes ... Move Up & Move Down ... Go To ... The Memo Window	
7. Browsing, Searching & Editing in the Records Window	75
The Records Window ... Individual Records ... Column Headings ... Configure Columns ... Estimated Dates ...

Trouble-shooting	
Index	238

Introduction

Check Your Software Version If the version number of your copy of Family Historian begins with a ‘6’, this is the right book for you. If possible, though, you should be on version 6.1 or later. If your version is earlier than 6.1, you can still use the book, but you may notice some minor differences between the book and the software; consequently we recommend that you install the latest free updates, to bring your copy up-to-date.

You can click **Check for Updates** on the **Help** menu to find about the latest version. You can also check your version number by clicking on **About Family Historian** on the same menu. If the version number begins with a ‘6’ and is earlier than 6.1, see www.family-historian.co.uk/downloads/latest-free-upgrade for details of free upgrades.

The Sample Project Part of the Family Historian installation is a sample project called ‘Family Historian Sample Project’. It is intended for you to use to try out new features, and to play with. Don’t be afraid to make changes to the data in the sample project. That’s what it is there for. But don’t store anything in it that you want to keep. You can reset it to its initial state whenever you want to, and it’s often useful to do that. But when you reset it, any changes you make will be lost. So don’t store anything in it that mustn’t be deleted.

Find Sample Project & Reset It To find the sample project, start Family Historian. If the **Project Window** doesn’t open automatically (it looks like Figure 1 below) click on **Project Window** on the **File** menu to open it. You should see a project called *Family Historian Sample Project* in the list of projects. If you can’t see it, you will need to reset the sample project. Even if you can see it, you are recommended to reset it anyway. This book makes frequent reference to the sample project, and by resetting it, you can ensure that the version you are running matches the version used in this book. To do this (assuming that you haven’t made changes to it that you don’t want to lose – see previous section) click on the **More Tasks** button, then **Samples**, then **Reset Sample Project**. If you plan to install the latest software updates, as discussed above, be sure to do so before resetting the sample project, so that you get the latest version of the latter also.

Copy Sample Project Some of the exercises in this book involve making changes to the sample project. You can use the **Undo** command on the **Edit** menu to undo these changes one-by-one if you wish. You can also reset the sample project at any time, using the instructions in the previous paragraph. But if you would prefer not to make changes to the sample project at all, there is an alternative, which is to make a copy of it, and use that when following the exercises and examples in this book. To copy a project, open the **Project Window**, select the project you wish to copy, and click on the **More Tasks** button. Then click **Copy Project** on the dropdown menu that appears. Modify the **Name of Copy** field to ensure the copy gets a unique name (such as “Family Historian Sample Project (2)”) and press **Copy**.

GEDCOM Occasionally in this document you will find references to *GEDCOM*. This is the name of the world-wide standard file format for shared genealogical data. When you send or receive genealogical data from other people, the most common way of doing this is to transfer the data in the form of a GEDCOM file. Family Historian is 100% GEDCOM-compatible, and 100% GEDCOM-complete – that is, it can load all GEDCOM (5.5) fields and can save all of its data to the GEDCOM format. In fact, Family Historian uses GEDCOM internally as the format in which it saves data.

- Transferring Data into Family Historian** To learn how to transfer data into Family Historian, read the section *Create a New Project* at the end of Chapter 1. During project creation you will be given the opportunity to import data from a GEDCOM file, or directly from another genealogy program. If you want to merge the data into an existing project, use the **Merge/Compare** command on the **File** menu (see Chapter 19 for more on this).
- Projects** As we will see, the normal, recommended way of working with Family Historian is to create a *project* to store your genealogy research. You can have as many projects as you like, but it is quite common to have only one, and store all your data in that. You will be shown how to create a new project at the end of Chapter 1. When you create a new project, Family Historian will create a folder on your hard disk for your project, to manage all files relating to your project for you.
- Standalone GEDCOM Files** You can also use Family Historian to view and edit *GEDCOM files*. When a GEDCOM file is not part of a Family Historian project it is called a *standalone* GEDCOM file. Bear in mind that even when you are working on a Family Historian project, your data is still stored in a GEDCOM file, within the project folder.
- The Help** Do not forget to use the Family Historian Help. If there isn't a **Help** button available, pressing **F1** will usually produce help which is relevant to the current context. The Family Historian Help is often the best place to go for *detailed* help. But it also contains more general information and tips, some of which is not available elsewhere.
- You can also open the Help by clicking on **Family Historian Help** on the Help menu within the program. The Help has a contents page, an index and a search facility. You are recommended to browse through the top-level items in the Contents page, and to drill down to explore topics in more detail – either by expanding sections in the Contents page, or by following links within Help pages.
- “How To” Help** Within the Help section ‘Using Family Historian’, the ‘How to’ section has numerous pages devoted to *how to* do things. If you are unsure how to do some task, this is the first place to look in the Help.
- Terminology** Certain windows in Family Historian are called ‘dialogs’. A *dialog* – also known as a *dialog box* – is a form-like window. Typically a dialog contains boxes (sometimes called *fields*) where you can enter data. It may also contain buttons you can press and options you can tick.

1 Getting Started with the Focus Window

Chapter Overview This chapter gives an introductory tour of some of the central features of Family Historian, based around the *Focus Window*. It ends by showing you how to create your first project.

The Project Window Before looking at the Focus Window, we must first look at another window that has already been mentioned in the Introduction: the *Project Window* – see Figure 1 below. This is the window you will see when you first open Family Historian. The Project Window lists all of the Family Historian projects in the specified location. When you first install Family Historian there will only be one project: *Family Historian Sample Project*.

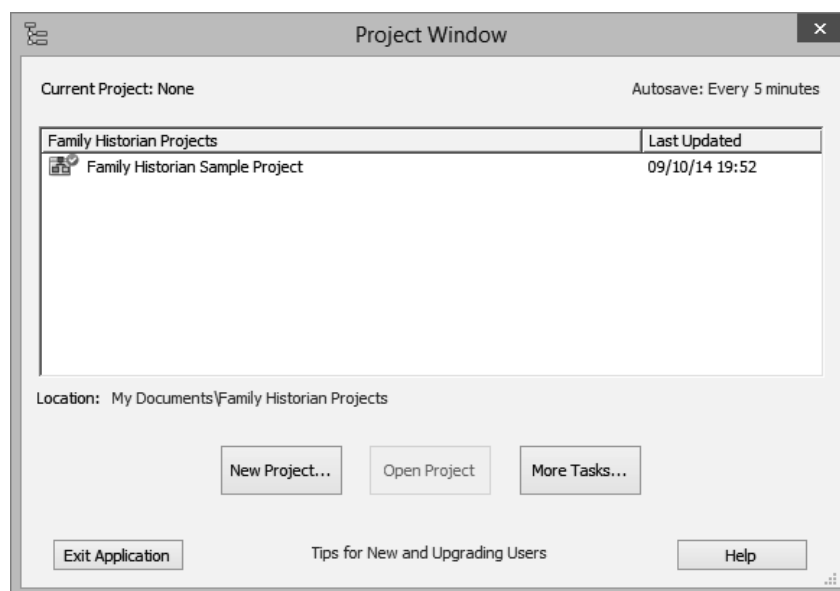

Figure 1 – The Project Window

The Family Historian Sample Project The Family Historian sample project was discussed in the Introduction (if you skipped the Introduction, please go back and read it now as it contains important information). The people mentioned in it are all fictitious.

Select the sample project now by clicking on it and then clicking on **Open Project**. Alternatively, you can also open it by double-clicking on the name 'Family Historian Sample Project' in the list. When you do this, the Project Window will close and you will see a screen like Figure 2 below.

1. Getting Started with the Focus Window

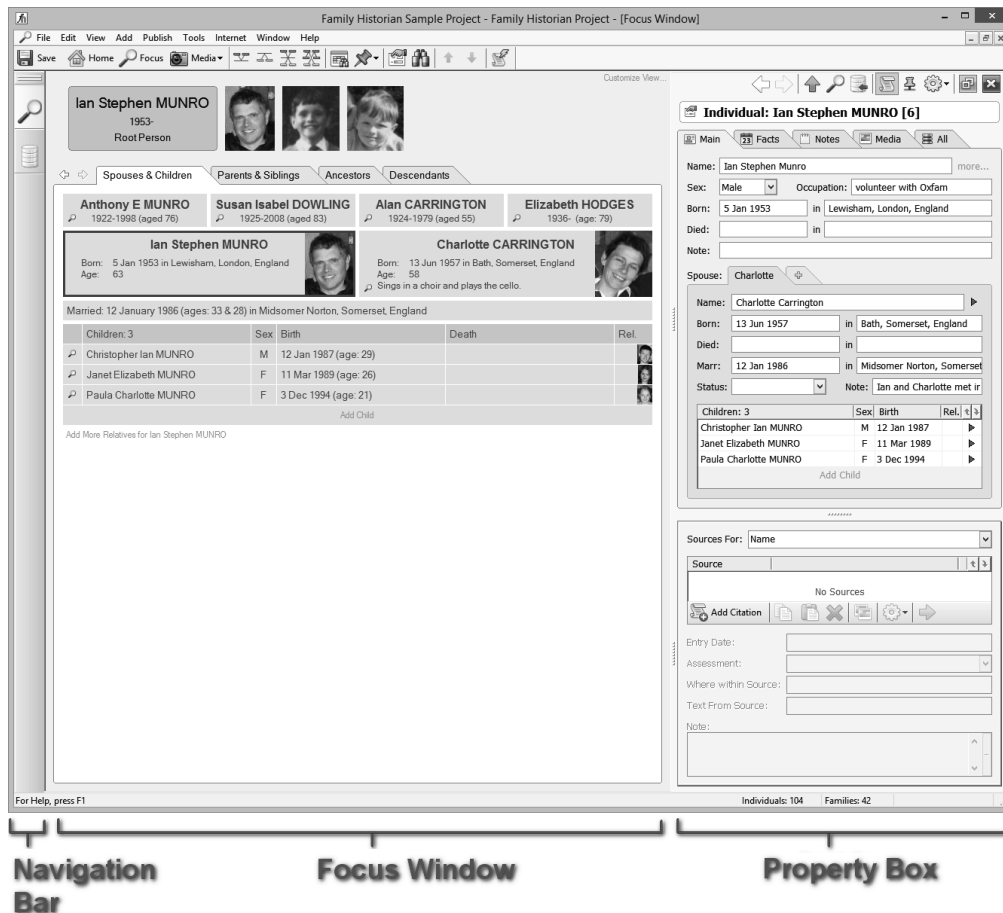

Figure 2 – The Sample Project with Three Marked Areas

The Navigation Bar The main body of the window in Figure 2 is made up of three areas:

- The Navigation Bar
- The Focus Window
- The Property Box

Workspace windows The Navigation Bar shows one icon for each open *workspace window* within Family Historian. A 'workspace window' is a window within a window – in this case, within the Family Historian main application window. The Focus Window is an example of a workspace window. The 'active' workspace window is highlighted in the Navigation Bar. Click on any workspace window icon to make that window active – that is, to switch between windows.

You can also right-click on any Navigation Bar icon to see a menu of things you can do with the window it represents. The last item on this menu is the **Close Window** command.

The first icon in Figure 3 is the magnifying glass icon which represents the Focus Window. The second icon (a database icon) is the *Records Window* icon. The Records Window – another workspace window – is not yet open. This is the exception to the rule that the Navigation Bar shows open windows. For convenience, the Records Window always has an icon on the Navigation Bar, even if closed.

Figure 3 – the Navigation Bar

We will look at the Records Window presently, and also other workspace windows, each of which has their own distinctive icon in the Navigation Bar.

The Navigation Bar is similar to the task bar in Windows. The task bar is the bar at the bottom of the screen, showing application icons. Clicking on application icons on the task bar lets you switch between open applications. Clicking on workspace window icons on the Navigation bar lets you switch between open workspace windows within the Family Historian application.

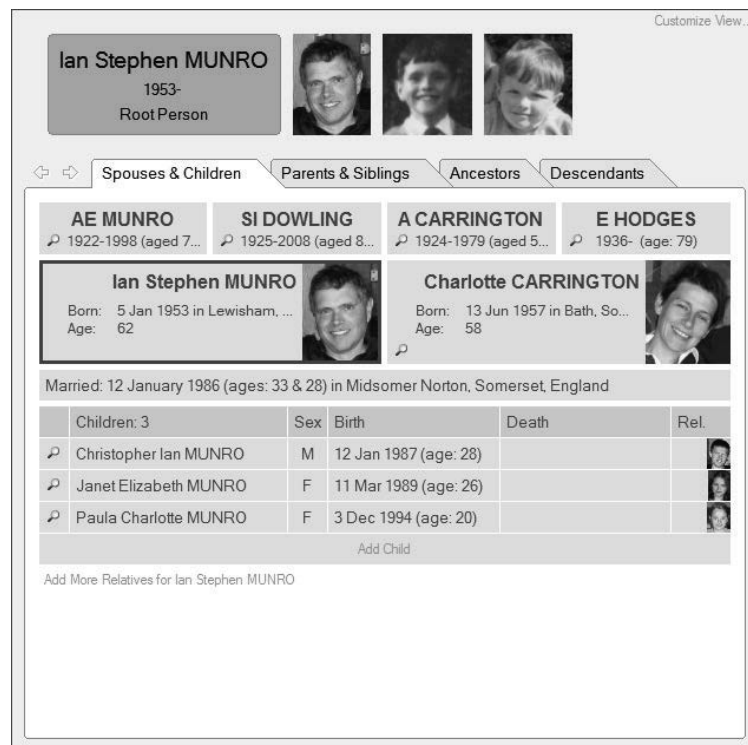

Figure 4 – The Focus Window: *Spouses & Children* Tab

The Focus Window The second of the marked areas in Figure 2 is the *Focus Window* (see Figure 4 above). The Focus Window shows information about a particular person, called the *focus person*, shown at the top of the window. In this case, the focus person is Ian Stephen Munro. There are three photos of Ian Munro, also shown at the top of the window. You can show up to 9 photos here if you wish, and if there is space. Don't confuse the term *focus person* with the term *root person*. As we will see later, they don't mean the same thing.

In the area immediately below this you should be able to see 4 tabs.¹ These are *Spouses & Children*, *Parents & Siblings*, *Ancestors* and *Descendants*.

The Spouses & Children Tab The *Spouses & Children* tab shows all of the focus person's spouses and children. In this particular case we can see that Ian Munro has one spouse only. If there were others, they would be shown. His wife is Charlotte Carrington, with whom he had 3 children: Christopher, Janet and Paula. Ian Munro himself also appears in the *Spouses & Children* tab, in the box next to Charlotte Carrington. His box has a

¹ The term 'tab' is used in this book for two quite different things. You will frequently see it used to refer to **Tab** key – a key on the keyboard, usually positioned just above the **Caps Lock** key. In this usage, **Tab** is written with a Capital and emphasized in **bold**. The other use of the term is to refer to a tab in a tabbed dialog box, or tabbed window, such as the Focus Window. When used in the latter sense, tab is spelled in lower-case, and is not in bold.

dark blue border round it, to show that this person is the focus person.

As well as showing Ian Munro himself, his spouses and his children, this tab also shows both of Ian's parents, and his spouses' parents.

Select a Record Within the Focus Window, you can select any record (that is, any person) by simply clicking on the box or row that represents that person. The selected box is indicated by a darker than normal background colour. When you select a record, the Property Box changes to show you information about that person. We will be looking at the Property Box in the next chapter.

Set the Focus Person You may have noticed that nearly all the boxes have a little picture of a magnifying glass in the bottom-left corner. Click on this magnifying glass to make that person the focus person – or just double-click on their box. Use either technique now to make Ian Munro's mother, Susan Dowling (S.I. Dowling in Figure 4) the focus person. When you do this, the Focus Window should change to look like Figure 5.

Multiple Spouse Families Figure 5 shows what the Spouses & Children tab looks like when the Focus Person has more than one spouse. Susan Dowling married twice, so the window shows both of these families. She had four children, Judy, Ian, Sally and Nigel, with her first husband, Anthony Munro. He died in 1998, and in 2001, she married Nigel Anderson. They had no children.

As can be seen by this example, the focus person gets his or her own box in each family, and each such box has a dark blue border. The boxes for his/her parents are also repeated. This way, each family is shown with all members present, including grandparents, and it is easy to see at a glance, who was married to whom, and, for any given child, who their parents and grandparents were.

Add Parents You can see from Figure 5 that Susan Dowling's father was Richard Dowling. But her mother is not given. Instead there is just the words "Add Susan's Mother" in light-coloured text. This is a link. When you click on this link – the actual text, not just the box – a menu appears with two menu commands: **Create New Record** and **Link Existing Record**. If you choose the former, Family Historian will create a new record for you, and link this record to Susan as her mother. You can then type in the name of this person, and any other details about her, in the Property Box (we will be looking at the Property Box in more detail later). If you choose the latter, **Link Existing Record**, Family Historian will let you select from your existing records, and link the selected person as Susan's mother.

Actually, there are two boxes in this particular case, which have the text link "Add Susan's Mother" – one for each family. Both links work exactly the same way. It doesn't make any difference which you choose.

Undo/Redo Try it now. Click on "Add Susan's Mother" (either box). Then choose **Create New Record**. Immediately, the text for Susan's mother's box changes to show "[unnamed person]". Notice that this changes in both boxes. Ordinarily you would go on to add a name for the new person in the Property Box, but we aren't ready to look at the Property Box yet, so instead of doing that, let's just undo what you just did. Click on the **Edit** menu. The first item on this menu is **Undo Create Parent [123]**. 123 is the record id that was allocated automatically to the new record you created. Click on this menu command now. When you do this, the new record you created for Susan's mother is removed and the box for Susan's mother reverts to showing the link "Add Susan's Mother".

Using the **Undo/Redo** commands on the **Edit** menu, you can undo and redo almost any change you make to your project data: creating new records, deleting records, and any edits you make to records – they can all be undone or redone. So don't be afraid to experiment!

The Focus Window doesn't just let you add parents for the focus person. You can also add parents for their spouses too. For example, you can add either father or mother for Nigel Anderson by clicking on the links "Add Nigel's father" or "Add Nigel's Mother".

Susan Isabel DOWLING
1925-2008
Mother of Ian MUNRO

Add Child

Add More Relatives for Susan Isabel DOWLING

Figure 5 – The Focus Window (Spouses & Children tab) with Susan Dowling as the focus person. She had two spouse families.

Add Children You've probably already guessed how to add children. If you want to add a child for Susan Dowling and Anthony Munro, click on the "Add Child" text link in the row immediately below their last child, Nigel Munro. If you want to add a child for Susan Dowling and Nigel Anderson, click on the "Add Child" text link in the otherwise empty area where their children would be listed if they had any.

Whenever you click on a text link for adding any kind of relative, you will always be given the choice of creating a new record for the new relative, or linking to an existing relative.

Add Spouses Adding a person's first spouse in the Focus Window is always easy. They will always have a box next to them where the spouse should go and there will be a link you can click labelled "Add Husband/Parent" or "Add Wife/Partner". But what if the person already has a spouse? How do you add another one?

Add More Relatives Below the last box in the Focus Window is another text link: "Add More Relatives for Susan Isabel Dowling". You can always click on this link to add relatives, if there isn't a handy box to click in. You can use it to add more spouses for the focus person.

You can also use it in other circumstances. Suppose, for example, that you wanted to add a child for Susan Dowling, but neither Anthony Munro nor Nigel Anderson were the father. In that case, you could use the “Add More Relatives” link, and it would let you pick the father – either an existing record or a new one.

Add More Sets of Parents

In Family Historian, a person doesn’t have to have just one set of parents. They can have as many as you like. They might have birth parents, foster parents, adoptive parents, and so on. You can use the “Add More Relatives” link to add additional sets of parents.

Add Relatives Using the Add Menu

Another technique for adding relatives is to use the **Add** menu. You can always add relatives of any kind for anyone using the **Add** menu. Just remember to first select the person who you want to add a relative to.

If a person has more than one box in the Focus Window, which can happen whether or not they are the focus person, you can select them (select their record) by clicking on any of the boxes for them. It doesn’t matter which one you choose.

Add Unrelated Person

When you add new people to a Family Historian project, most of the time you will be adding them as relatives of people that you have already added. But the people you add don’t have to be relatives. If you want to add a person who is not related to anyone already in your project, click on the **Add** menu, and then **Unrelated Individual**.

Add Grand-parents and Grand-children

There is no facility to add grandparents or grandchildren as such. There is no need for it. All relationships effectively reduce to combinations of parent-child and spouse-spouse relationships. So you don’t need to enter a grandparent for a person. Simply add a parent, and then add a parent for that parent. Equally to add a grandchild, add a child, and then a child for that child.

Go Back & Go Forward Buttons

The Focus Window has its own **Go Back** and **Go Forward** buttons. These are in the top-left corner, just to the left of the ‘Spouses & Children’ tab. They are greyed when there is no-one to ‘go back’ or ‘go forward’ to. Try using them now. At this point, if you have been following everything carefully, Susan Dowling should still be the focus person, and the Focus Window should look like Figure 5 above. The left arrow button is the ‘go back’ button and it should be ungreyed now. Click on it to ‘go back’ to the previous focus person. When you do this the right arrow becomes ungreyed. Click on this to ‘go forward’ again, to return to where you have just been.

The Home Button

A very useful button is the **Home** button. This is on the left side of the main application toolbar. Click it now to switch back to showing Ian Munro as the focus person.

As we will see later, at any given time, there are several other windows that you could be viewing, apart from just the Focus Window. Even if you had been viewing one of these other windows, the **Home** button would still be visible on the toolbar, and clicking it, it would jump you back to the Focus Window, with the *root person* as the focus person. So who or what is the *root person*?

The Root Person (the File Root)

In every Family Historian project, you can specify that one person is the *root person* or *file root*. The two terms mean the same thing. There are various benefits to making someone the file root. For example, when Family Historian opens a project, it will always initially show the Focus Window with the file root as the focus person. In the focus person box (the box at the top of the Focus Window), it will always show how the focus person is related to the file root, if they are related. If the focus person is the file root, it will just say ‘Root Person’. As we have seen, when you click the Home button, it jumps you back to the file root.

There are other benefits, but these will do for now.

Make File Root You can change file root very easily at any time. When you're viewing the Focus Window, you just need to right-click² on any person and a menu appears. The first command on this menu is always **Make File Root**.

Ian Munro should be the current focus person. In the box for him at the top of the Window, it should have the text "Root Person". Right-click now on Ian's wife, Charlotte Carrington and make her the file root. When you do this, she doesn't become the focus person – that is still Ian Munro. But if you look at the box for him at the top of the window you should see that instead of "Root Person", it now says "Husband of Charlotte CARRINGTON". This is because Charlotte Carrington is now the file root.

To make Ian Munro the file root once again, you could just click on **Undo File Root Change** on the **Edit** menu. Or you could right-click on Ian Munro's box and click on the **Make File Root** command in the menu that appears. Choose either of these options now, and make Ian Munro the file root once again.

If you aren't using the Focus Window when you wish to make someone the file root, you don't have to switch to the Focus Window specially to do this. Just select the person who you wish to make the file root, and click on the **Edit** menu, then **File Root** and **Set as File Root**.

The Focus Button

Another useful toolbar button is the **Focus** button. This button is just to the right of the **Home** button. If you select a person and click the **Focus** button, that will show the selected person as the focus person in the Focus Window. You may be wondering why that's useful. Why not just double-click on the person's box or click on their magnifying glass to make them the focus person? Bear in mind that those options are only available when you are viewing the Focus Window, and as we have already mentioned, there is much more to Family Historian than just the Focus Window.

You may also be wondering what the difference is between the Focus button on the main toolbar, and the Focus Window icon (the magnifying glass) in the Navigation Bar (see Figure 3 above). The difference is that the toolbar Focus button only works when you have first selected a person. When you click on the Focus button, it activates the Focus Window and makes the selected person the focus person.

No selection is required when you click on the Focus Window icon in the Navigation Bar. The Focus Window doesn't change at all when you click on this icon. It is merely *activated*. That is, if it is hidden because other windows are in front of it, it is moved in front of those other windows – but that is all. So if you want to go back to the Focus Window *without changing its contents*, you need to click on the Focus Window icon. Another difference is that you can right-click on the Focus Window icon, as you can with any icon on the Navigation bar, and a menu will appear, showing you actions that you can take with the window in question. Right-clicking on toolbar buttons doesn't do anything.

Adopted, Fostered, Step, etc. You should by now know how to make Ian Munro's mother, Susan Dowling, the focus person. Do so now.³ The Focus Window should once again look like Figure 5 above. Look at the rows for the four children of Susan Dowling and Anthony Munro. The rightmost column is labelled 'Rel'. This is short for 'Relationship to

² In this document, whenever you see the phrase "right-click" this just means "click using the right mouse button".

³ If you can't work out how to do it, here are some suggestions: if you can see her box, double-click on it, or click on the magnifying glass in the corner of the box. If you can't see her box, click the Home button which should take you back to Ian Munro as focus person, and she should be visible. Now double-click on her box.
